

CodeBox Announces Integration with Boom

Single family property managers can now bring their existing CodeBoxes to Boom.

No new hardware required!

SAN ANTONIO, TX—August 27th, 2026 —CodeBox announced a new integration with Boom, the AI-powered rental operating system for property managers, enabling single family operators to offer self-guided showings directly within the Boom platform. The integration allows property managers to manage their new and existing CodeBoxes through Boom and automatically generate unique, time-limited access codes for each scheduled showing.

"Single family property managers are under pressure to fill vacancies faster while keeping their operations lean," said Rob Whiting, CEO of Boom. "Our integration with CodeBox makes it easy to offer self-guided showings at scale, without asking property managers to reinvest in new hardware or overhaul the tools they already rely on."

For single family portfolios where properties are often scattered across a metro area, agent-led showings require significant coordination and leasing agent time. Self-guided showings remove that friction, allowing prospective residents to tour properties on their own schedule without requiring an agent to be present. With the CodeBox and Boom integration, property managers can offer self-guided showings at scale while maintaining security and full visibility into who is accessing their properties.

Central to that flexibility is portability. Unlike proprietary lockbox systems that lock property managers into a single platform, CodeBoxes are transferable across software providers. Property managers already using CodeBoxes with another showing management platform can bring that same hardware to Boom, protecting their hardware investment and eliminating the friction of switching.

"Property managers deserve the freedom to choose the software that works best for their business without being forced to replace their hardware," said Maria Higby, Director of Operations at CodeBox. "Our integration with Boom gives single family operators the flexibility to bring their existing CodeBoxes to a new platform and hit the ground running with self-guided showings from day one."

About boom

Boom is the AI-powered rental operating system for property managers. The platform connects leasing (BoomCRM), screening (BoomScreen), and resident reporting (BoomReport) into one system, replacing the fragmented point solutions in use today. Boom serves single family rental, manufactured housing, and multifamily operators. Learn more at boompay.app.
